Summary

Software engineer who moved from sales into tech after becoming curious about how the products being sold actually worked, first as a technical analyst, then as a developer. Builds full stack applications with React, Django, and React Native, with recent projects in payments, streaming, LLM agents and RAG pipelines.

Skills

AI: LangGraph, RAG, Vector Embeddings, ChromaDB, Gemini API, Tool Calling, Agent Memory
Languages and Frameworks: Python, JavaScript, TypeScript, Django, DRF, FastAPI, React, Next.js, React Native (Expo), Zustand
Tools and Fundamentals: PostgreSQL, Supabase, REST APIs, JWT, Server-Sent Events, Razorpay, Clerk, Docker, Git

Experience

Software Engineer, Angadi World Technologies **Sep 2025 – Present**

- Built features for a multi-platform application suite using React (frontend), Django and Python (backend), and React Native (mobile)
- Developed and deployed Razorpay payment integration with checkout flow logic across web and mobile platforms
- Built discount and order cancellation logic on the backend, translating business rules into working functionality
- Debugged issues across the frontend, backend, and API integrations and delivered fixes through the development lifecycle

Technical Analyst, Angadi World Technologies **May 2024 – Aug 2025**

- Bridged communication between non-technical clients and a team of developers and designers, running weekly syncs to relay requirements and timelines
- Translated unstructured client requirements into clear documentation, reducing rework from unclear requirements
- Identified an operational gap for a D2C client lacking order tracking visibility and scoped an order management feature that shaped the project feature set

Business Development Associate, BYJU'S **Jul 2023 – Apr 2024**

- Prioritized leads using school, rank, and internal exam performance data, contributing to a 25% regional sales increase over 3 months
- Diagnosed learning gaps through needs assessments with parents and onboarded enrolled families, exceeding weekly revenue targets and earning Top Nationwide Performer recognition

Projects

Pythia **LangGraph, FastAPI, Next.js, Gemini, Tavily, Docker**

- Built a Perplexity style AI search agent in LangGraph that decides when to search the web (Tavily) before answering with Gemini, with conversation memory through a checkpointer
- Streamed agent output from FastAPI over server-sent events to a Next.js frontend that shows searching, reading, and writing stages live
- Containerized the backend with Docker and deployed it on Render, with the frontend connected to the live API

Kapoor Kloset **DRF, Next.js, PostgreSQL, JWT, Razorpay**

- Built a resale store for celebrity wardrobe pieces with a DRF backend and Next.js frontend covering catalog browsing, wishlist, cart, and checkout
- Implemented email OTP registration with JWT access and refresh tokens, and a checkout that converts cart to order in a database transaction with prices snapshotted at purchase
- Integrated Razorpay (test mode) with server side order creation and signature verification, tested end to end, and deployed on Render and Vercel

Kribb **React Native (Expo), TypeScript, Zustand, Clerk, Supabase**

- Built a cross platform real estate app with file based routing, protected routes, and tab navigation using Expo Router
- Implemented property search and filtering, saved properties, and detail pages with an image carousel and map preview
- Integrated Clerk authentication (email OTP) with Supabase user sync, and enforced access control with row level security policies tied to Clerk JWT claims

Astro-RAG **Python, Gemini API, ChromaDB**

- Built a RAG pipeline from scratch without a framework: compiled a source document on Vedic astrology houses, split it manually into 4 sections, and embedded them with Gemini
- Stored the vectors in ChromaDB, retrieved the top 2 chunks by cosine similarity for each question, and built a prompt from them for Gemini to answer
- Future scope: PDF ingestion, semantic chunking, hybrid search (vector plus keyword), and AI security (prompt injection and jailbreak defenses, PII handling, graceful handling of model failures)

Education

Bachelor of Technology in Data Science and Artificial Intelligence, ICFAI Tech, IBS Hyderabad | June 2023 | **CGPA: 8.03/10**

Achievements

- Solved 925+ DSA problems on LeetCode (311 Easy, 466 Medium, 148 Hard)
- Ranked 1st in the university in the 4th semester with a 9.6/10 GPA
